

UAS Field Applications

You will be randomly assigned a job from the list below. These are all mapping surveys of these locations. As the remote PIC and lead on the job you must answer the following questions. These jobs will be conducted today at noon local time.

- a. What airspace will this operation take place in?
 - b. Can this flight be operated under Part 107?
 - c. If not, what needs to be done in order to make this flight legal?
 - d. What are the current weather conditions at this location? What will the weather conditions be at noon local time?
 - e. What special hazards are associated with this operation?
 - f. How do you plan to conduct this operation? Can you fly from one location? Will you need to move locations? Will you use more than one aircraft?
 - g. What type of aircraft would you like for this operation?
 - h. How much time do you anticipate this job to take?
 - i. How large of a crew do you need to safely conduct this operation?
 - j. How much will you charge for this job?
 - k. What resources other than the aircraft will you need for this operation?
 - l. What operational considerations do you need to plan for?
-
1. 29°28'20.07"N, 98°23'26.66"W Kirby, Texas NE of San Antonio. Railroad marshaling yard needs surveying. Survey the entire yard from 180 feet AGL.
 2. 27°55'41.21"N, 82°35'7.24"W Howard Frankland Bridge. Inspect the entire length of the bridge from each coast. Along side, over and under. In addition do a max height 400' high overview of the entire span of the bridge.
 3. 44°21'45.04"N, 68°15'1.72"W Eagle Lake water survey. South East of Bar Harbor, Maine. 3D point cloud and 2D survey. Fly the 3D survey at 150' AGL and the 2d Survey at 250 feet AGL. Map the entire lake including the lake shore.
 4. 41°21'23.85"N, 95°56'38.69"W to 41° 4'56.37"N, 95°51'51.51"W Missouri River map from north of Omaha, to just north of La Platte. Survey height of 100 feet AGL. 2D map of the river and the bank up to 200 yards from the bank.
 5. 43°24'4.29"N, 113° 1'33.36"W Mountain survey. 3D point cloud map of the entire mountain formation. 150' AGL above the highest peak. Adjust altitude during survey to stay under 400' AGL at all times.
